Alta Data Technologies' PCCD-1553 is a Type II PCMCIA - PCCARD (Cardbus) interface module with 1 or 2 MIL-STD-1553 channels supported by the latest software technologies. The PCCD-1553 card are based on the industry's most advanced 32-bit 1553 FPGA protocol engine, *AltaCore*™, and by a feature-rich application programming interface, *AltaAPI*™, which is a multi-layer ANSI C and Windows .NET (MSVS 2005 C++, C#, VB .NET) architecture. This hardware and software package provides increased system performance and reduces integration time.

AltaCore-1553 is guaranteed 1553B Notice II & IV compliant and all cards are manufactured to the highest IPC-Level 3 standards and AS9100 processes. Cards are available in dual-function (BC/Mon or multi-RT/Monitor) or full-function (BC, mRT and Mon) configurations. Playback and Signal Generation are part of BC operations. Alta is committed to a risk free integration and will be glad to help with any level of your system development.
